

LET'S WIPE OUT *Aedes* MOSQUITOES

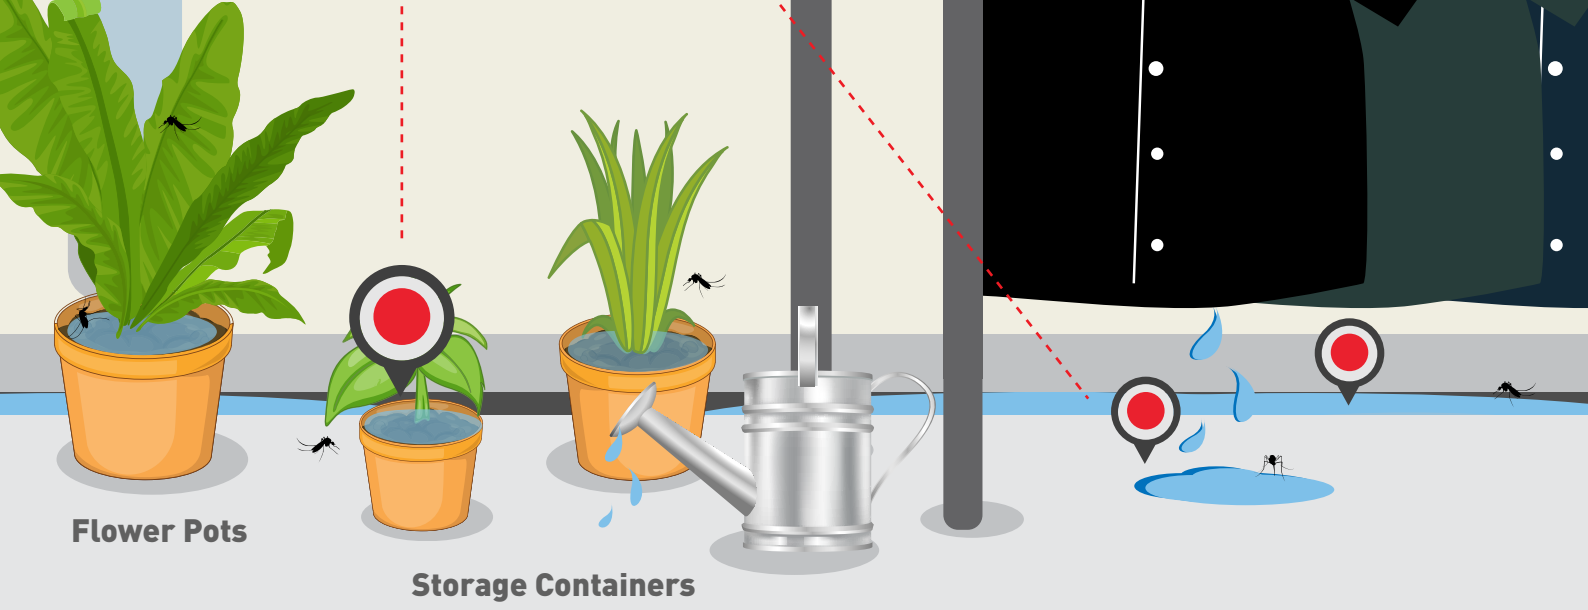

Identifying the Aedes Mosquito

- 1** ♀ Only **female mosquitoes** feed on blood to develop eggs
- 2** 🐛 A female mosquito lays up to **300 eggs** at one time
Eggs can lay dormant in dry conditions for up to 9 months
- 3** ⚖️ Weighing a mere **1/15,000 oz**
Most people don't feel an adult mosquito on their skin
- 4** 🌡️ **Heat** attracts mosquitoes
People who have just exercised tend to get bitten
- 5** 🦟 **Aedes mosquitoes** have **white markings** on their **thorax and legs**

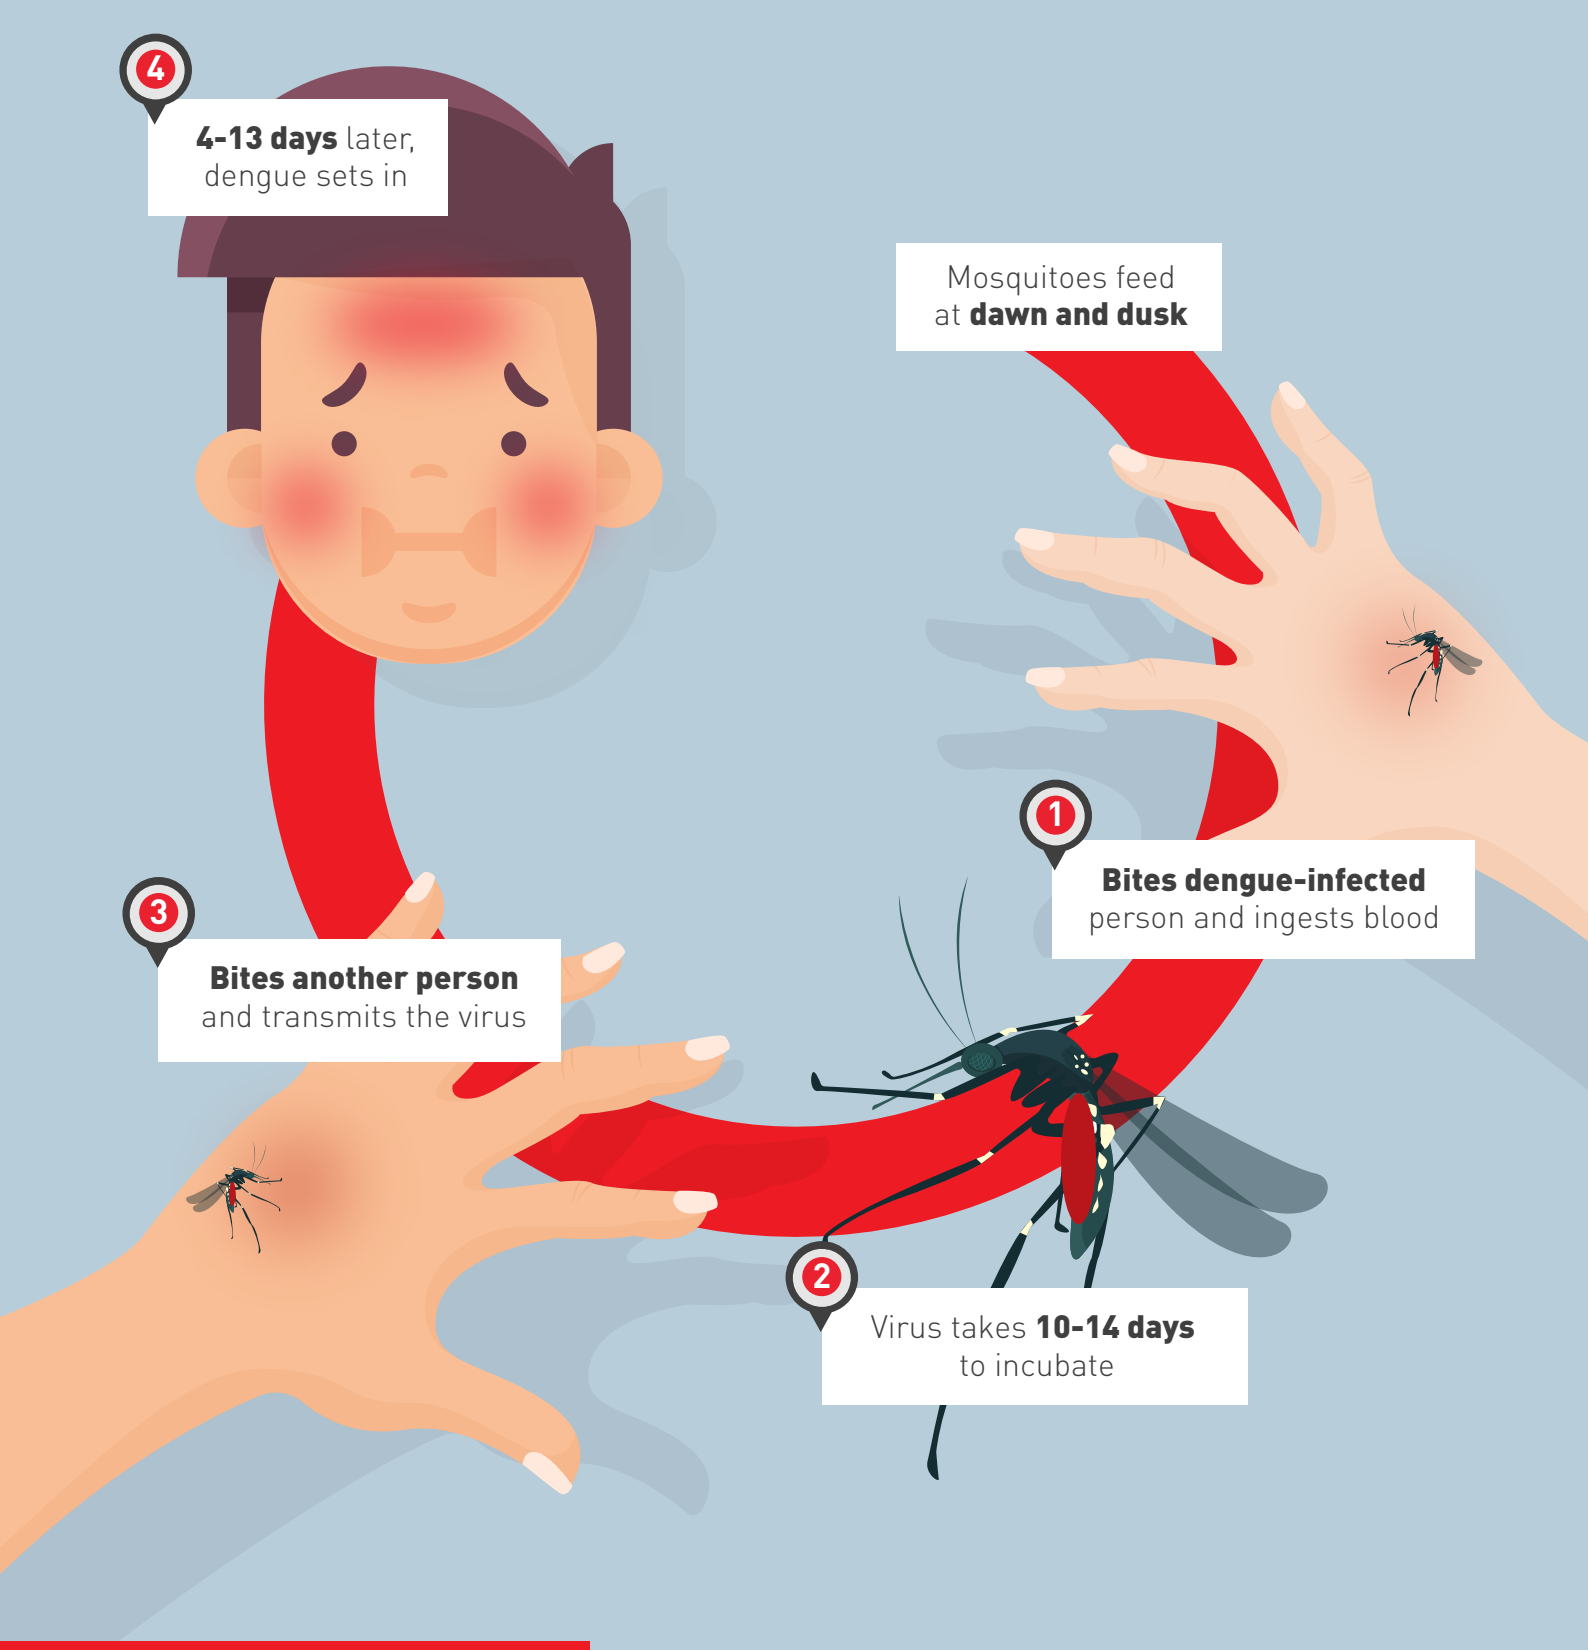

Attracted to **dark colours**

Breeds in places where **water can be contained**, including **clogged roof gutters**, areas with lots of **greenery** and natural habitats like **tree holes** and **dry leaves**

How is Dengue Spread?

Dengue is mainly spread by the **female Aedes aegypti mosquito**

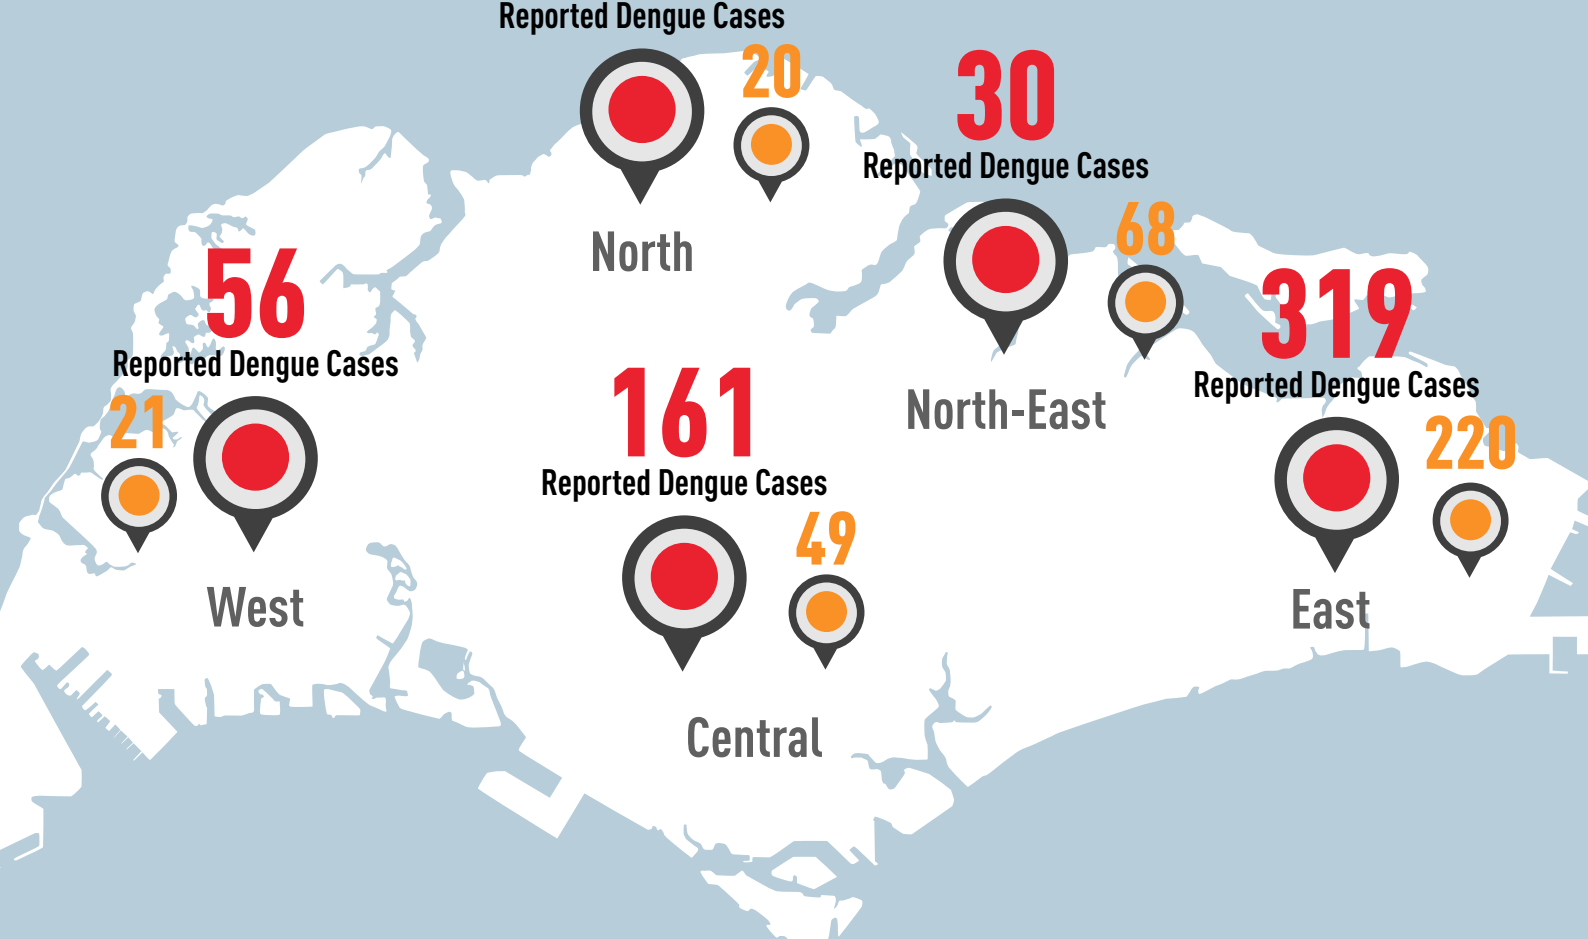

4 Common Mozzie Myths

- 1** All mosquitoes **spread dengue** ❌
Out of about **140 species** in Singapore, only **2 transmit dengue**
- Mosquitoes like **sweet people** ❌
Mosquitoes are attracted to the **carbon dioxide** we give out and our **body odour** along with **heat, movement & clothes colour**
- All mosquito **bite** ❌
Only **female mosquitoes** bite as they **require protein in blood** to produce eggs
- Lemongrass** repels mosquitoes ✅
Lemongrass contains **Citronella oil** It masks human scent which **attracts mosquitoes**

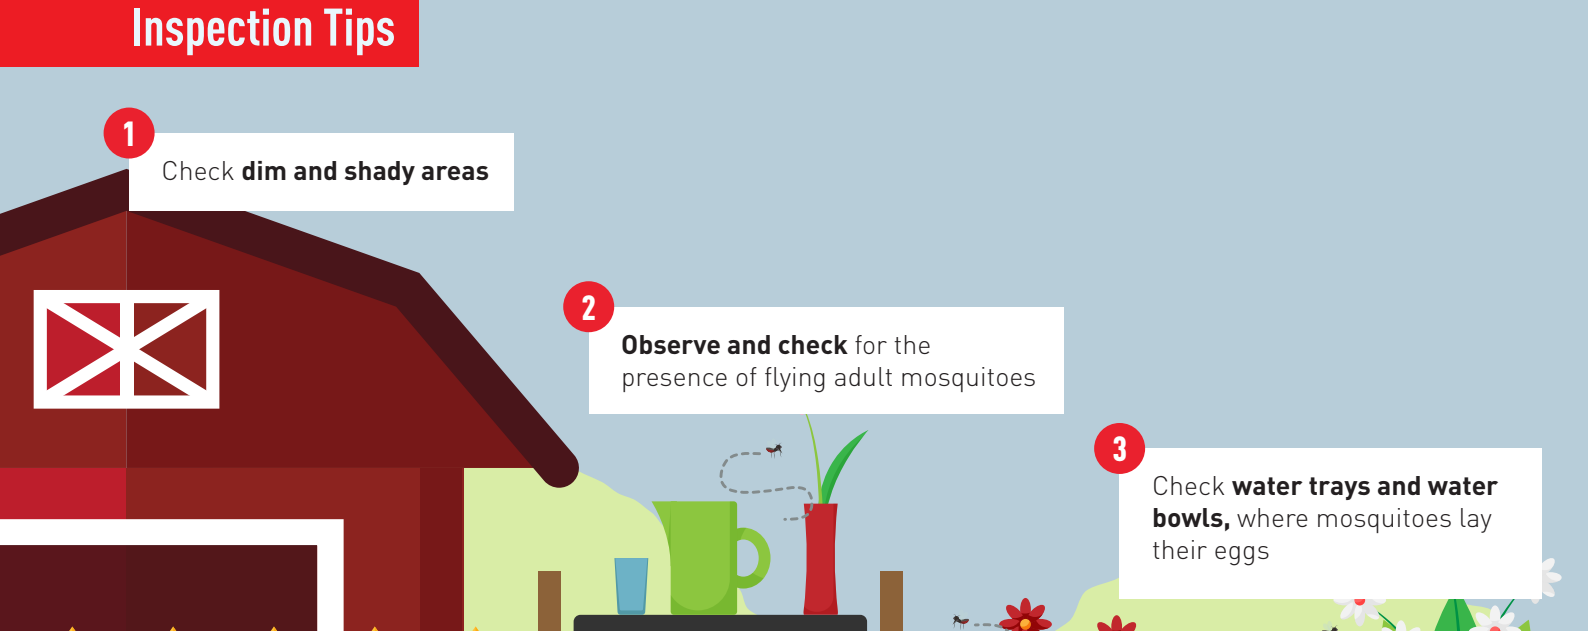

Dengue Hotspots

This information is accurate as of 11 June 2019 - Source: <https://www.nea.gov.sg/dengue-zika/dengue/dengue-clusters>

Inspection Tips

Solutions

- 1** **Water-Base Fogging**
Controls and reduces adult mosquito population with eco-green solution
- 2** **Larviciding Treatment**
Controls the development of mosquito breeding or larvae in stagnant water
- 3** **Indoor Mosquito Trap**
Mosclean Light Trap controls mosquito population indoors
- 4** **Outdoor Mosquito Trap**
Mosquito and In2Care traps help control mosquito populations in gardens and parks
